Termites can devastate your property for years unnoticed until the damage becomes significant. Without effective intervention, these pests can compromise your building's structural integrity, resulting in substantial expenses that could have been prevented with proactive measures.

Sentricon® AlwaysActive™ allows you to systematically target and eliminate termite colonies from the inside out, ensuring the safety and longevity of your property.

ACTIVE FROM DAY ONE. ALL DAY, EVERYDAY

USING THEIR SOCIAL BEHAVIOUR AGAINST THEM

After years of rigorous research and testing, **Sentricon® AlwaysActive™** leverages the termites' social habits against them to transfer the active ingredient from workers up to the queen. This targeted approach guarantees an efficient and thorough elimination of the entire colony.

1 PestBusters strategically places the baiting stations.

2 Termites feed on the sentricon baits.

3 Infected termites return and distributes it to the colony.

4 The colony is eliminated over time.

TRADITIONAL METHODS

TRADITIONAL METHODS

INVASIVE

Requires drilling, trenching, and chemical application, disrupting the property.

CHEMICAL EXPOSURE

Increases risk of exposure to potentially harmful chemicals.

IMMEDIATE BUT TEMPORARY

Does not eliminate the termite colony leading to future infestations.

Sentricon® AlwaysActive™

NON-INVASIVE

Eliminates the need for trenching, drilling, or chemical spraying on the property.

MEASURABLE RESULTS

Allows you to monitor termite activities regularly.

24/7, LONG-TERM PROTECTION

Directly targets termite colonies, preventing future infestations. Able to eliminate termites from day one.

PestBusters Singapore is your trusted partner to install Sentricon baiting stations, assess bait requirements efficiently, and monitor activity continuously.

AVERAGE SIZED TERMITE COLONIES TAKE 2-3 MONTHS TO ELIMINATE

Independent researchers reported that an average termite colony can be eliminated within 2-3 months with **Sentricon® AlwaysActive™**. However, this varies depending on the severity of the infestation. Less established colonies may be eliminated in mere weeks.

Compared to traditional methods, **Sentricon® AlwaysActive™** utilises a long-term yet strategic approach, targeting the source of the problem day and night, rather than scratching the surface for short-term relief.

SAFE GUARD YOUR PROPERTY FROM FUTURE INFESTATIONS

Eliminating current infestations is just the first step. Once a property is infected, it becomes susceptible to re-infestation.

Installing **Sentricon® AlwaysActive™** ensures robust protection against potential future termite threats **24/7/365+**.
